Thank you for your request for information on TMQ C-Plot. Please find listed below the answers to your questions and some accompanying documentation on the system and charts that are available. If you require further details please contact us.

Since you have expressed an interest in our line of products, you might like to know a little more about our company, particularly with a view to backup and service.

TMQ International is an Australian owned company specialising in the supply of sophisticated equipment to commercial shipping, the professional fishing industry and recreational fishing sector. We manufacture TMQ autopilots and computer based plotters and we are agents for many Japanese and European product ranges, including but not limited to, JRC, Lorenz, Lecomble & Schmitt and AlfaTronix.

Because we deal with people whose livelihood depends on the products we sell, we have developed an exceptional service response to back our product range. Our people not only service electronics but also design electronic hardware and write sophisticated navigational software, so you are assured that there is real expertise to back you up.

We like to point out to prospective recreational buyers that the majority of the models we sell start where the best of the purely recreational units normally stop. Our equipment is derived from the most powerful navigational and fish finding equipment available in the world today, but you will be surprised how easy it is to operate these sophisticated machines. The bottom line is that you are assured of exceptional performance and value for money when you choose to fit your craft up with any products we sell.

Please find enclosed some brochures on our C-Plot plotting system, and also some pricing listed below. For further information, please call us.
